

# Integrating Microsoft SQL Server Business Intelligence with MOSS

This one-day hands on course demonstrates how to integrate Microsoft SQL Server Business Intelligence and Reporting with Microsoft Office SharePoint Server 2007 (MOSS) without having to engage in any custom development. The course is designed to teach attendee's and provide them with the hands-on experience with creating dashboard sites and creating and displaying lists of Key Performance Indicators (KPIs). This course will also provide details on how to configure Reporting Services and SharePoint to easily deploy reports so that attendee's will have an opportunity to apply their knowledge as soon as they get back to the workplace.

## **Who Should Attend:**

This course is designed for anyone that is looking to find out how to easily integrate SQL Server Reporting Services with SharePoint and understand the Understanding the Business Intelligence (BI) features of MOSS.

## **Course Objectives:**

Attendees will achieve an end-to-end understanding of how Microsoft SQL Server Reporting Services can be integrated with SharePoint to provide dashboard sites and interactive drill-through reporting.

## **Course Outline:**

**Module 1: Understanding the BI features of MOSS**

**Module 2: Creating Dashboard Sites**

**Module 3: Integration with SQL Server Reporting Services**

**Module 4: Creating and displaying lists of Key Performance Indicators (KPIs)**
